

# Oscillation of delay dynamic equations with mixed nonlinearities

Prof.Dr.Ağacık Zafer

**Abstract.** Interval oscillation criteria for second-order delay dynamic equations having mixed nonlinearities are obtained. The results are new even for the special time scales  $T = \mathbb{R}$  and  $T = \mathbb{Z}$ . The theory can be applied to second order dynamic equations regardless of the choice of delta or nabla derivatives.
